

ExxonMobil Taichung (Taiwan)

Date Completed: August 2015

Number of Tanks: Five (05)

Capacity: 90 ~ 1,000 m³

Product Type: Lubricant Oil blending

ExxonMobil International Corporation - Taiwan Branch offers chemicals; lubricants and petroleum specialties; liquefied natural gas (LNG); and also operates in fuels marketing in aviation and marine sectors in Taiwan.

Premier Six was approached by ExxonMobil to design the Pulse Air Mixing system for 2 new tanks and retrofit into 3 numbers of their existing 300m³ storage tanks. The project requires in depth research and consideration to avoid internal works. Due to its high flexibility, the system's accumulation plates layout was reviewed and successfully incorporated, providing the existing storage tanks with a new identity in the plant's operation.

The project was completed on schedule thanks to the extensive planning and coordination works with the EPC even though the teams are ocean apart, in different countries and time zones.
